The Hamilton Standard Hydromatic propeller introduced in the 1930s was a significant advance over the counterweight, controllable pitch propeller. Application of oil pressure to both sides of the actuating piston provided increased capacity and the capability of feathering or unfeathering by a single control knob.

Hamilton Standard Propeller, Three-Blade, Constant-Speed ...

The basic propeller control forces acting on the Hamilton Standard propeller are centrifugal twisting force and high pressure oil from the governor. The centrifugal force acting on each blade of a rotating propeller includes a component force that results in a twisting moment about the blade center line that tends, at all times, to move the blade toward low pitch.

Four different propeller systems have had the honor of being used to help the C-130 take flight, including Curtis Electric propellers, three-bladed Aeroproducts propellers, the four-bladed Hamilton Standard 54H60 and the six-bladed Dowty R391 propeller. However, all active C-130J aircraft employ the R391.

Getting to Know the 54H60 Propeller System

We all know that the prop converts power to thrust. That's pretty basic. So let's consider some statistics. A -15 (93") has a prop disc area of: 47.17 square feet. A -9 (99") has a prop disc area of: 53.46 square feet. A -6 (102") has a prop disc area of: 56.75 square feet. So... The -9 has 6¼ more sq ft of prop pulling you than a -15.
