See your John Deere dealer. Faulty wiring or loose connections. Defective temperature control switch. See your John Deere dealer. Outside temperature too low, below 21 gets warmer. If there is a malfunction in system, see your John Deere dealer. Condenser is overheating. Clean condenser screens, cores and fins of condenser and radiator.

Troubleshooting - John Deere

Unfortunately the wiring diagram does not go into detail as to where the circuit breaks off to the HCU. What I can see is that there is a six pin weatherpack connector that circuit 933 goes through via pin E on its way to the HCU controller. The book I have does not offer routing diagrams or connector location information.

I have a jd 4960 that 3pt suddenly quit working. Will not

...

I purchased a John Deere 4960 MFWD w/powershift a year ago. It had just come out of the shop with a transmission rebuild. They had replaced a bunch of parts but mainly the ring gear and disks for #3 planetary brake. The symptoms were listed as "no reverse and noise in transmission." We used the tractor for planting and pulling a grain cart and ...
