Mars and eventually traveled to Earth. ... of ultraviolet radiation in deep space for as long as 10 years — enough ...

Study suggests life could've started on Mars - New York ...

Theoretically, biological materials could survive on a space rock, lie dormant and continue to survive if they were properly shielded from the radiation in space and survive the process of...

No, the coronavirus didn't come from outer space | Space

In the nearly three years since Earther started, the site has been a space marked by freedom to write without limits. It's Yessenia who helped carve out the expansive space we now have to work in. She was hired as our environmental justice writer and quickly made it clear to readers that every ...

Yessenia Has Left Earth(er)

Personally, I'm not too fussed about WHERE life came from (Be it Earth or

space itself), but HOW life came to be. With much debate on if metabolism came first or genetics, nothing really explains how cells first developed. If we're ever to understand that, the question of life on Earth just might be one step closer to being understood, and ...

Life on Earth | Space.com Forums

Imagine microscopic life-forms, such as bacteria, transported through space, and landing on another planet. The bacteria finding suitable conditions for its survival could then start multiplying ...
