Final Exam Aswer - CCNA 2 Router and Routing Basics ...

A router is a network device that connects different computer networks by routing packets from one network to the other. This device is usually connected to two or more different networks. When a data packet comes to a router port, the router reads the address information in the packet to determine out which port the packet will be sent.

What is a router? | CCNA

Types of Routing To be able to route a packet, a router must know at least the following: Destination address to where the packet is destined. Layer 3 protocols such an IP take care of this. Neighboring routers from which remote networks can be learned of and packets can be moved to [...]
